RCLCO

Executive Summary

DATE:	January 4, 2017
TO:	Mr. Shawn A. Kirkpatrick
COMPANY:	Bastrop Economic Development Corporation
FROM:	Todd LaRue
SUBJECT:	Update of Comprehensive Housing Supply and Demand Analysis in Bastrop, TX

RCLCO previously conducted a comprehensive housing market analysis for the City of Bastrop, providing market-driven demand recommendations and a review of current availability of housing in Bastrop. Our objective is to update relevant market conditions to ensure the previously presented strategy is captures the best opportunity for the City.

Economics and Demographics

Since RCLCO's original housing study was conducted in 4Q 2014, employment in the Austin MSA has grown by 8%, or 71,600 new jobs. The pace of economic expansion within the Austin MSA has been quite robust, exceeding that of the other metropolitan areas in the Texas Triangle, comprising Dallas-Fort Worth, Houston, and San Antonio, as well as the US as a whole.

However, the pace of growth has moderated over the prior two quarters. Furthermore, the size of the Austin MSA employment base neither grew nor shrunk in the 3Q of 2016, with the metro containing just over 994,000 non-farm jobs. The Austin MSA economy is likely being affected by the decline in oil prices over the past two years and the resultant slowdown in State government hiring and growth, a stronger US Dollar curbing Texas exports, as well as consolidation and mergers within the tech space.

Professional & Business Services employment has enjoyed the highest growth between 2014 and 2016. The next fastest growing sector has been Trade, Transportation, & Utilities, as the Austin region's economy grows in national importance from its historically local serving nature.

Although Bastrop County represents a small share (4.3%) of the Austin region's total population, the County is projected to nearly double in size by 2050, enjoying an annual growth rate faster than 4%. This will increase the County's share of total MSA population to 5.3% by 2050.

Housing Market Conditions

The Austin resale housing market continues to experience significant increases in resale transactions and price appreciation as the new home market has struggled to deliver product in meaningful amounts. The number of resale transactions in the Austin MSA in 2015 marked a record high. Additionally, resale transactions through the 3Q of 2016 put the metro area on pace to exceed 2015's record high.

However, resale listings have not risen commensurate with the increase in transactions, pushing the level of inventory down to three months whereas six months of inventory represents equilibrium levels. This tight inventory environment has led to continued resale price growth across the Austin region, with each year setting a new record high resale price.

This trend of rising resale pricing is also found at the local level in Bastrop County, and to a more rapid degree. Three-fourths of total resale transactions in 2011 occurred below \$200,000 in Bastrop County. In 2016, this proportion fell to 46%. As home prices continue to increase considerably with more buyers entering the supply constrained Austin metropolitan area resale market, the Bastrop area has attracted buyers interested in lower priced options or getting more home than is available in other parts of the metro area. Although the Bastrop area has maintained its total share of Austin MSA resales between 2012 and 2015, it has increased its capture of homes priced below \$200,000, reflecting buyers' interest in Bastrop offerings.

Although single-family permitting activity in the Austin MSA remained flat between 2014 and 2015, new home sales still increased in 2015 as builders had inventory permitted in 2014 to work through and sell. The Austin MSA is on pace to exceed 2015 permitting levels in 2016, which should translate to higher new home closings in the near-term (the annual pace of starts among homebuilders has reached a nine-year high in 3Q 2016, suggesting a near-term rise in new home closings).

New Housing Demand Conditions and Strategy

During the Great Recession, new housing activity in the Southeast submarket, which includes Bastrop, was more subdued, with the submarket's capture of closings decreasing from 9% in 2007 to 5% in 2012. Additionally, during this time period months of inventory for new homes was higher in the Bastrop area than the overall MSA average. More desirable, established markets like the North submarket (which includes Round Rock and other parts of Williamson County) were in higher demand and experienced tighter levels of new home inventory as buyers flocked to quality developments in proven areas.

The Southeast submarket has yet to fully return to prior levels of new housing activity since the recovery and expansion from the Great Recession. Closings in the Southeast submarket are small in volume, representing 6% of total MSA closings on average since 2013. However, the relative level of new housing starts and lot availability as of late make for tight inventory dynamics. Since 2014, the Southeast submarket has experienced tighter levels of inventory than the Austin MSA average, with the submarket currently containing just one and a half months of new home inventory. Homebuilders in the Southeast submarket, and especially the Bastrop area, have difficulty finding lots at reasonable prices in quality developments that offer competitive returns relative to those found along the I-35 corridor.

This tight level of housing inventory has particularly limited the Bastrop area's ability to capture a larger share of new home closings. Were the area more active, featuring additional new communities and product types, the Bastrop area would likely have been able to capture a larger share of MSA closings coming out of the Great Recession and would currently be experiencing greater sales volume.

In the near term, offering new, value-oriented product targeting young families and empty-nesters, will allow the submarket to increase its capture of the MSA. In the medium-term, as employment access and schools improve, the Southeast submarket should compete effectively with the South and East submarkets.

Critical Assumptions

Our conclusions are based on our analysis of the information available from our own sources and from the client as of the date of this report. We assume that the information is correct, complete, and reliable.

We made certain assumptions about the future performance of the global, national, and local economy and real estate market, and on other factors similarly outside either our control or that of the client. We analyzed trends and the information available to us in drawing these conclusions. However, given the fluid and dynamic nature of the economy and real estate markets, as well as the uncertainty surrounding particularly the near-term future, it is critical to monitor the economy and markets continuously and to revisit the aforementioned conclusions periodically to ensure that they are reflective of changing market conditions.

We assume that the economy and real estate markets will grow at a stable and moderate rate to 2020 and beyond. However, stable and moderate growth patterns are historically not sustainable over extended periods of time, the economy is cyclical, and real estate markets are typically highly sensitive to business cycles. Further, it is very difficult to predict when an economic and real estate upturn will end.

With the above in mind, we assume that the long term average absorption rates and price changes will be as projected, realizing that most of the time performance will be either above or below said average rates.

Our analysis does not consider the potential impact of future economic shocks on the national and/or local economy, and does not consider the potential benefits from major "booms" that may occur. Similarly, the analysis does not reflect the residual impact on the real estate market and the competitive environment of such a shock or boom. Also, it is important to note that it is difficult to predict changing consumer and market psychology.

As such, we recommend the close monitoring of the economy and the marketplace, and updating this analysis as appropriate.

Further, the project and investment economics should be "stress tested" to ensure that potential fluctuations in revenue and cost assumptions resulting from alternative scenarios regarding the economy and real estate market conditions will not cause failure.

In addition, we assume that the following will occur in accordance with current expectations:

- Economic, employment, and household growth.
- Other forecasts of trends and demographic and economic patterns, including consumer confidence levels.
- The cost of development and construction.
- Tax laws (i.e., property and income tax rates, deductibility of mortgage interest, and so forth).
- Availability and cost of capital and mortgage financing for real estate developers, owners and buyers.
- Competitive projects will be developed as planned (active and future) and that a reasonable stream of supply offerings will satisfy real estate demand.
- Major public works projects occur and are completed as planned.

Should any of the above change, this analysis should be updated, with the conclusions reviewed accordingly (and possibly revised).

General Limiting Conditions

Reasonable efforts have been made to ensure that the data contained in this study reflect accurate and timely information and are believed to be reliable. This study is based on estimates, assumptions, and other information developed by RCLCO from its independent research effort, general knowledge of the industry, and consultations with the client and its representatives. No responsibility is assumed for inaccuracies in reporting by the client, its agent, and representatives or in any other data source used in preparing or presenting this study. This report is based on information that to our knowledge was current as of the date of this report, and RCLCO has not undertaken any update of its research effort since such date.

Our report may contain prospective financial information, estimates, or opinions that represent our view of reasonable expectations at a particular time, but such information, estimates, or opinions are not offered as predictions or assurances that a particular level of income or profit will be achieved, that particular events will occur, or that a particular price will be offered or accepted. Actual results achieved during the period covered by our prospective financial analysis may vary from those described in our report, and the variations may be material. Therefore, no warranty or representation is made by RCLCO that any of the projected values or results contained in this study will be achieved.

Possession of this study does not carry with it the right of publication thereof or to use the name of "Robert Charles Lesser & Co." or "RCLCO" in any manner without first obtaining the prior written consent of RCLCO. No abstracting, excerpting, or summarization of this study may be made without first obtaining the prior written consent of RCLCO. This report is not to be used in conjunction with any public or private offering of securities or other similar purpose where it may be relied upon to any degree by any person other than the client without first obtaining the prior written consent of RCLCO. This study may not be used for any purpose other than that for which it is prepared or for which prior written consent has first been obtained from RCLCO.

Austin, TX MSA; 2012 - 2016

6.00%

Economics/Demographics

- Professional & Business Services employment has enjoyed strong growth of 11% over the past two years, driven by numerous corporate relocations and expansions due to the local area culture's attractiveness and lower cost of doing business compared to the East and West Coasts. This generally higher paying sector of the employment base has increasingly become more important to the area's overall economy, growing from 16.5% of total MSA employment to 17%, the largest positive move among all sectors.
- The next fastest growing sector following Professional & Business Services has been Trade, Transportation, and Utilities, with employment growing by 9%. This sector of the Austin MSA economy has typically been household serving in nature, with the area's employment in this sector comprising a smaller share of total jobs than at the national level.

Economics/Demographics

- Historically, Bastrop County has represented a small share of total Austin MSA total population and capture of new growth. The County's share of total Austin MSA population has ranged from 4.6% in 2000 to its current level, a historical low, of 4.1%.
- While the County's share has declined slightly since 2000, this trend is likely to reverse in the future. By 2032, the county's share of MSA population is projected to return to its historical high of 4.6% indicating an average annual population growth rate just faster than 4% in Bastrop County over the next 20 years.
- Additionally, Bastrop County is projected by the Texas State Data Center to grow at the fastest annual rate among all counties within the Austin, TX MSA. However, given the rapid rate of projected growth throughout the region, Bastrop County is projected to only grow its share of total MSA population from 4.3% in 2010 to 5.3% in 2050. While small in share, this growth represents approximately 180,000 new residents, causing the County to double in size from 2016 level.

Housing Market Conditions

Housing Supply and Demand Analysis Update | Bastrop EDC | January 4, 2017 | E7-13402.01

7

Housing Market Conditions – Resale Activity

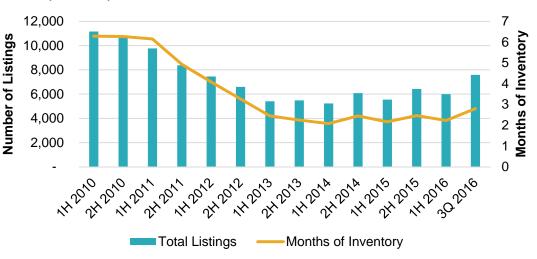

- The Austin resale housing market continues to experience significant increases in resale transactions and price appreciation as the new home market has struggled to deliver product in meaningful amounts.
- The number of resale transactions in the Austin MSA in 2015 marked a record high, surpassing the previous pre-recession high in 2006 by 4%.
- In 2015, resale volume grew 4.6% over 2014 levels after having remained essentially flat between 2013 and 2014. Additionally, resale transactions through the 3Q of 2016 put the metro area on pace to exceed 2015's record high level by 3.8%, reaching nearly 32,800 transactions.
- Resale volume growth has been hamstrung by low levels of listings inventory. The number of existing home listings declined by 53% between 1H 2010 and 1H 2014 to a multiyear low, with inventory levels declining from 6 months of inventory to only 2 months. Since 1H 2014, the number of resale listings has increased by 14% and 2.8 months of inventory.
- However, resale listings have not risen commensurate with the increase in transactions, leading to continued resale price growth across the Austin MSA. The average resale price reached a record high in 2015, after having risen 7% on average per year during this low inventory environment. Transactions through the 3Q 2016 are priced 4.5% higher on average than those in 2015.

Resale Transaction Volume Austin, TX MSA; 2013-2015

Number of Listings and Months of Inventory of Existing Homes Austin, TX MSA; 2010 – 3Q 2016

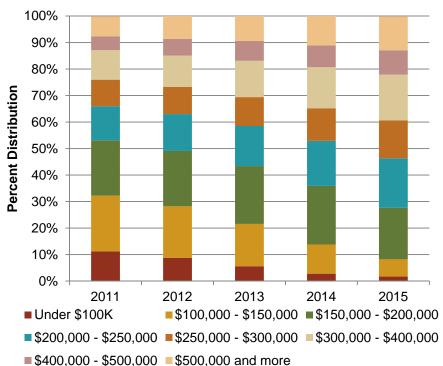

Source: Austin Board of Realtors; TAMU Real Estate Center; RCLCO

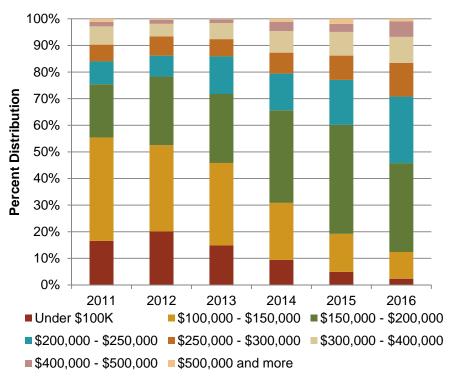

Housing Market Conditions – Existing Home Price Appreciation

 In 2011, just over half of existing home transactions across the Austin MSA occurred below \$200,000; as of RCLCO's original housing study conducted in 2014, this segment of the market decreased to 35% of total transactions. These price appreciations continued through 2015 with fewer than 28% of total transactions occurring below \$200,000.

Resale Transactions by Price Band Austin, TX MSA; 2011–2015

Resale Transactions by Price Band Bastrop ISD, Texas; 2011– September 2016

RCL

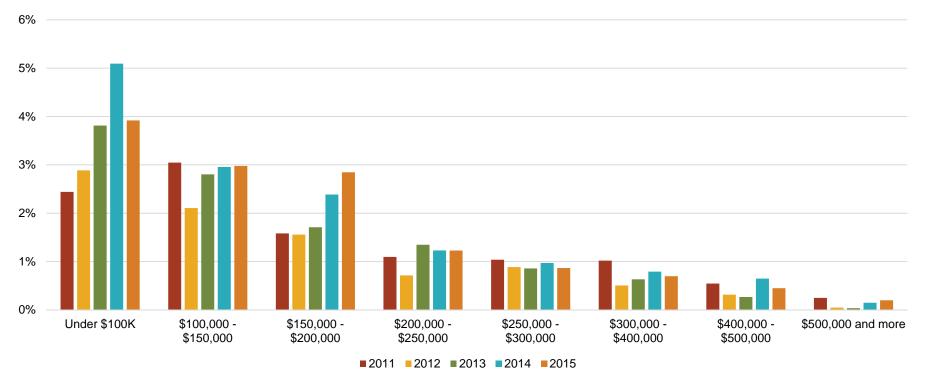

Note: Data unavailable at the MSA level for 2016. Source: Real Estate Center of Texas; Independence Title; RCLCO

This trend is also found within Bastrop, and to a more severe degree. In 2016, 46% of all transactions occurred below \$200,000 while in 2011 this proportion was three-fourths of total transactions. However, Bastrop is a lower priced market than the MSA as a whole. As such, below \$150,000 is a more appropriate upper threshold for demonstrating price increases within Bastrop. Homes priced below this price point comprised 55% of all transactions in 2011 whereas in 2016 homes priced below accounted for merely 12% of all home sales.

Housing Market Conditions – Bastrop Existing Home Sales

 As home prices continue to increase considerably with more buyers entering the supply constrained resale market, the Bastrop area has attracted buyers interested in lower priced options or getting more home than is available in other parts of the metro area. Although the Bastrop area has increased its capture of homes priced below \$200,000 from 2% in 2012 to 2.9% in 2015, its overall share of MSA sales has remained the same.

Bastrop Area Capture of Austin MSA Resales by Price Band Austin, TX MSA; 2011–2015

Housing Supply and Demand Analysis Update | Bastrop EDC | January 4, 2017 | E7-13402.01

Housing Market Conditions – New Home Market

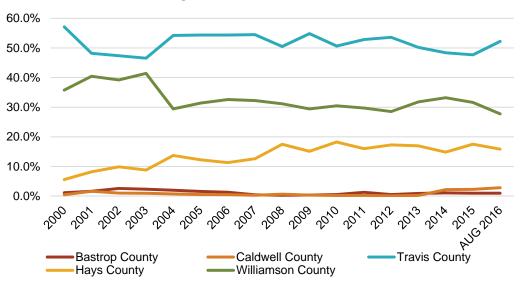

- Annual single-family permitting activity in the Austin MSA remained flat between 2014 and 2015 with just over 11,800 permits issued, as weather delays and labor shortages contributed to increased construction times. However, new home sales still increased as builders had inventory permitted in 2014 to work through and sell. Given single-family permits issued through August of 2016, the MSA is on-pace to exceed 2015 levels by 5%.
- As alluded to above, new home closings in 2015 grew by 9% over 2014 figures as the market continues its steady recovery from recession lows. Closings through the 1H 2016 suggest the Austin MSA is on-pace to increase by 10% from 2015 levels.
- Looking ahead, this trend is likely to continue as permits issued continue to increase and builders start construction on more homes. The annual pace of home starts has increased sharply to a nine-year high in 3Q 2016 with 13,400 starts, up by 16% over the annual pace of starts in 3Q 2015.
- Since the recovery from the Great Recession, counties within the Austin MSA have maintained their capture of total MSA activity. Bastrop County continues to capture the same share of MSA single-family permitting activity, at 1%, as it has since 2013. Hays County and Travis County have largely absorbed Williamson County's lost share of permitting activity.

New Home Closings Austin, TX MSA; 2010–2016

Note: Data through 1H 2016 represents an on-pace figure for 2016.

Bastrop County Share of MSA Single-Family Permitting Activity Austin, TX MSA; 2000 – August 2016

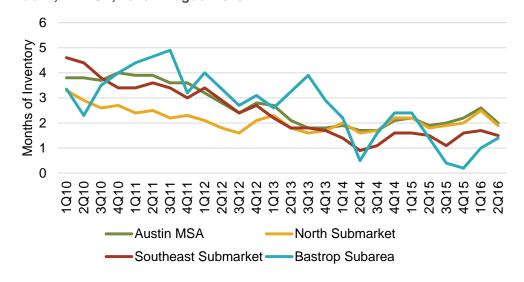

Source: U.S. Department of Housing and Urban Development; Metrostudy; RCLCO

Housing Market Conditions – Southeast Submarket New Home Market

- New home closings in the Southeast Submarket, which includes Bastrop, have captured a small share of approximately 6% of the total MSA activity. This capture rate has remained consistent between 2011 through the first half of 2016.
- While closings are small in volume, the relative level of new starts and lot availability as of late make for tight inventory dynamics. During the Great Recession, new housing activity in the Southeast submarket tracked the overall MSA while more desirable, established markets like the North submarket (which includes Round Rock and other parts of Williamson County) were in higher demand as buyers flocked to quality developments in proven areas.
- However, the Southeast submarket has yet to fully return to prior levels of activity since the recovery and expansion from the Great Recession, with a lower level of inventory than the MSA as a whole.
- Homebuilders in the Southeast, and especially the Bastrop area, have difficulty finding lots at reasonable prices in quality developments that offer competitive returns relative to those found along the I-35 corridor. This very tight level of housing inventory has particularly limited the Bastrop area's ability to capture a larger share of new home closings.

Inventory of New Homes Austin, TX MSA; 2010 – August 2016

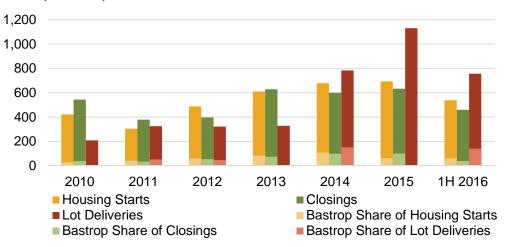

RCI

Source: Metrostudy; RCLCO

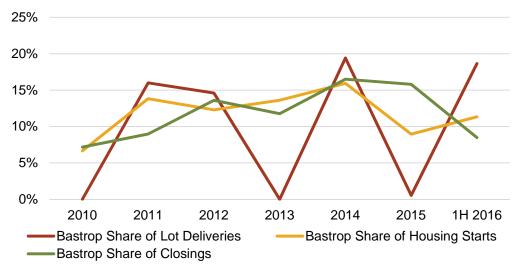

Housing Market Conditions – Bastrop Area New Home Market

- Were the submarket more active, featuring a variety of new communities and product types, the Southeast would likely have been able to capture a larger share of MSA closings coming out of the Great Recession.
- This is especially relevant to the Bastrop area which has, in some years, failed to deliver any new developable lots. Despite capturing 12% of submarket closings between 2010 and 2015, the Bastrop area has only delivered 8% of the submarket's total new developable lots during this time period, leading to the area's tight level of lot supply.
- These dynamics are likely changing with the opening of new communities in the Southeast submarket, such as Easton Park, Addison, and Goodnight Ranch, which have helped the submarket deliver three times as many developable lots in 2015 as were delivered in 2013. While located closer in to central Austin employment, these communities are in otherwise overlooked areas outside of the MSA's north-south growth paradigm.
- The delivery of Pecan Park helped the Bastrop area represent 19% of total new lot deliveries in the Southeast submarket. Ensuring that new communities and lots continue to develop in Bastrop will allow the area to maintain, and even increase, its capture of the submarket's new home closings.

Competitive Supply

Housing Supply and Demand Analysis Update | Bastrop EDC | January 4, 2017 | E7-13402.01

14

New Regional Communities

- Two communities have been included among the list of regionally significant master-planned communities, Easton Park and Siena.
- · Although Siena was delivered in 2013, this community in Round Rock has recently achieved notable success, closing on 164 homes in 2015 and 103 homes through the first half of 2016. Much of the current product offerings from the 10 homebuilders onsite appeal to young families with attainable price points largely in the \$200Ks.
- · Easton Park, located southeast of Austin near McKinney Falls State Park, has closed out all 150 homes in its first section with homebuilders offering interesting, differentiated, and attainably priced product. Further contributing to Easton Park's success, is the focus on appealing and attractive community-wide amenities.

Bryant Park; Easton Park

Regional Positioning – Master-Planned Communities

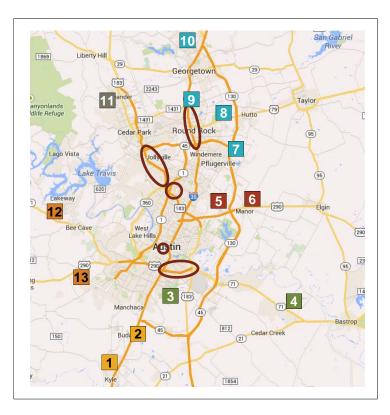

- Among the regional master-planned communities that RCLCO has tracked from the original housing study, homes have become more expensive, as a whole, with builders able to retain some lower priced product by situating homes on smaller lot sizes.
- Base minimum home prices among these large master-planned communities have increased between 10 to 22%, with the exception of Sweetwater and Belterra as these communities have delivered smaller lot and smaller home size offerings to maintain lower price points.
- Despite rising prices across the MSA, collective closings among the below master-planned communities have increased their capture of *Comparable Master-Planned Communities in Austin MSA, TX* 2016

total MSA closings between 2014 and 2016, from 13% to 15%, demonstrating the appeal of master-planned communities to quality conscious buyers.

- Siena, a new community in Round Rock featuring 10 homebuilders, overtook Sun City Texas' position as the top selling community in the Austin MSA by offering attainably priced products with attractive access to employment cores.
- However, higher priced communities, such as Belterra, Sweetwater, and Crystal Falls, have maintained their pace of closings but lost overall market share.

RCL

Regional Positioning – Master Planned Communities

• Whereas the half of structural demand in the MSA lies between \$150K and \$300K, master-planned communities typically capture an outsized share of the market by offering segmented product types with a variety of orientations targeting the bulk of buyers. In 2014, over 62% of closings among the surveyed communities (as shown on page 13), occurred between \$150K and \$300K.

2014

· However, price appreciation pressures across the MSA have decreased this share of total closings to 57%. As this share of product decreases, the master-planned community capture of total MSA closings will likely decrease, improving the opportunity for lower priced builder subdivisions and master-planned communities in less developed submarkets, such as Bastrop's Southeast, to capitalize on this underserved segment.

Bastrop Area Communities

At the local level, there are five master-planned communities of significance with a variety of existing and planned orientations.

1. The Colony

This community of large lot custom and semi-custom homes has been under development since the early 2000s. Sitterle Homes is offering 32 production homes on half acre lots, with base home prices between \$308K and \$380K, to appeal to buyers interested in less hassle and a more immediate move in.

2. Hunter's Crossing

The last phase of 170 homes for this community of over 500 homes was developed by DR Horton starting in 2011. With an average sales pace of 3 - 4 homes per month, DR Horton found success with entry level product priced between \$159K and \$204K.

3. Pecan Park

This community, located along the Colorado River, is currently under-development with plans for over 680 units at build out. Scott Felder and David Weekley have taken down 62 lots in the first section of this community. Combined, these two builders have closed on six homes and started on 21 homes since the spring of 2016. Base home prices range from \$226K to \$274K. In addition to 69 acres of commercial pad sites, 11 acres of the development are permitted for multifamily development.

4. Piney Creek Bend

The Bastrop City Council rezoned the 99 acre property from singlefamily to planned development, permitting higher density products. At build out, this community will feature 170 homes with 25 acres set aside for park and greenspace.

5. XS Ranch

Since RCLCO's housing study in 2014, the Bastrop City Council established a PID in September of 2015, with the District permitted to issue \$45M during the first three years of development for infrastructure improvements. In April of 2016, the Bastrop City Council approved a plat for the first section of the 8,700 acre property.

Southeast Submarket Demand – Potential Capture of MSA

- Southeast submarket continues to capture only 6% of sales in the MSA, limited by the lack of new supply available in the submarket. However, new home activity across the MSA has increased such that the strategy outlined on the following page will likely help the Southeast submarket realize higher closings than previously projected.
- In the near term, offering new, value-oriented product targeting young families, will allow the submarket to achieve closer to a 10% capture of the MSA, once a critical mass of development is achieved. This is comparable to what is currently being achieved in the South submarket. The delivery of Pecan Park will replace lost activity as a result of the buildout of Hunters Crossing. However, the Bastrop area needs to increase its offering of these types of communities in order to achieve its full near-term capture potential.
- In the medium-term, as employment access and schools improve, the Southeast submarket competes effectively with the South and East submarkets. Over the past two years, workers in Bastrop

County have started commuting to closer employment cores, with 44% of workers commuting less than 25 miles in 2014 compared to 2011 figures, suggesting that new employment has located in areas closer to Bastrop County workers. Additionally, Hwy 71 improvements currently underway will increase access to Central Austin employment. Efforts to improve local schools appear to be effective with Bastrop ISD ratings rising relative to its peers, surpassing Hays CISD for Student Progress.

• Long term: As the area matures, as recent trends suggest the area is on pace for, and multiple communities with various orientations and products are offered simultaneously including XS Ranch, the Southeast submarket, namely the Bastrop area, has the potential to become one of Austin's most desirable areas, achieving attractive pricing and strong sales pace.

Average Annual Capture of MSA Demand Potential Southeast Submarket; 2016-2030

Source: U.S. Census American Community Survey; Moody's Economy.com; Texas Education Agency; Texas A&M Real Estate Center; RCLCO

Bastrop Area Demand – Potential Capture of Southeast Submarket

	Phase 1 (0-5 Years)	Phase 2 (5-10 Years)	Phase 3 (10+ Years)
Assumptions	 Multiple product lines (2-4) are offered in the following price ranges: \$150K-\$200K; \$200K-\$250K; \$250K-\$350K SE submarket is able to attract similar demand as currently being achieved in South submarket with the offering of new product; SW, West, North, and NW Submarkets continue to dominate in higher price points 	 North and Northwest submarkets approach build out in well-located and desirable locations resulting in a submarket shift; Bastrop is well suited to capitalize on shift Improved access challenges and strong branding and marketing alleviate the notion of Bastrop as "far out" from MSA employment 	 North and Northwest submarkets are unable to offer affordable homes in meaningful numbers, shifting momentum to South and SE submarkets Emergence of local employment core, in addition to other emerging cores located south of current concentrations
SE Submarket Share of the MSA	 8% MSA Capture, beginning to offer product in the \$250,000-\$350,000 price point 	 11% MSA Capture; simultaneous maturity of area and submarket shift continues 	 Up to 14%+ MSA capture in SE Submarket potential; assuming a broad range of price points are being penetrated
Annual Average Sales in SE Submarket (Percent of Sales \$250+)	970 (38%)	1,480 (42%)	2,000 (44%)
Annual Average Sales in Bastrop (Assuming MPC and Builder Subdivisions)	+/- 250	+/- 400	500+

- Assuming the development of a large scale master-planned community as well as multiple builder subdivisions, Bastrop could build up to a capture of 25%-30% of Submarket closings. This capture rate has been achieved during the pre-recession years, when the Travis County portion of the Southeast submarket did not provide a competitive commute to employment cores with the fastgrowing North and Northwest submarkets and the Bastrop area provided a distinct lifestyle alternative to other areas of the MSA.
- Going forward, the Southeast submarket will garner housing momentum from submarket shifts across the MSA. The opportunity Bastrop stands to capture differs from the rest of the Southeast submarket, which will benefit more from employment cores emerging along I-35 South Corridor and value-oriented product offerings, while Bastrop will benefit more from the lifestyle afforded by the area's amenities, both natural and man-made.

RCL

Critical Assumptions

Our conclusions are based on our analysis of the information available from our own sources and from the client as of the date of this report. We assume that the information is correct, complete, and reliable.

We made certain assumptions about the future performance of the global, national, and local economy and real estate market, and on other factors similarly outside either our control or that of the client. We analyzed trends and the information available to us in drawing these conclusions. However, given the fluid and dynamic nature of the economy and real estate markets, as well as the uncertainty surrounding particularly the near-term future, it is critical to monitor the economy and markets continuously and to revisit the aforementioned conclusions periodically to ensure that they stand the test of time.

We assume that the economy and real estate markets bottomed out in the current cycle in 2012, and that they will grow at a stable and moderate rate, more or less in a straight line on average for the duration of the analysis period (to 2020 and beyond). However, history tells us that stable and moderate growth patterns are not sustainable over extended periods of time, and that the economy is cyclical and that the real estate markets are typically highly sensitive to business cycles. Further, it is very difficult to predict when the current economic and real estate downturns will end, and what will be the shape and pace of growth once they are recovered.

With the above in mind, we assume that the long term average absorption rates and price changes will be as projected, realizing that most of the time performance will be either above or below said average rates.

Our analysis does not take into account the potential impact of future economic shocks on the national and/or local economy, and does not necessarily account for the potential benefits from major "booms," if and when they occur. Similarly, the analysis does not necessarily reflect the residual impact on the real estate market and the competitive environment of such a shock or boom. Also, it is important to note that it is difficult to predict changing consumer and market psychology.

For all the reasons outlined, we recommend the close monitoring of the economy and the marketplace, and updating this analysis as appropriate.

Further, the project and investment economics should be "stress tested" to ensure that potential fluctuations in revenue and cost assumptions resulting from alternative scenarios regarding the economy and real estate market conditions will not cause failure.

In addition, we assume that once the current cycle is over, the following will occur in accordance with current expectations:

- Economic, employment, and household growth.
- Other forecasts of trends and demographic and economic patterns, including consumer confidence levels.
- The cost of development and construction.
- Tax laws (i.e., property and income tax rates, deductibility of mortgage interest, and so forth).
- The availability and cost of capital and mortgage financing for real estate developers, owners and buyers, at levels present in the market before the most recent run up (i.e., early 2000s levels).
- Competitive projects will be developed as planned (active and future) and that a reasonable stream of supply offerings will satisfy real estate demand.
- Major public works projects occur and are completed as planned.

Should any of the above change, this analysis should probably be updated, with the conclusions reviewed accordingly (and possibly revised).

General Limiting Conditions

Reasonable efforts have been made to ensure that the data contained in this study reflect accurate and timely information and are believed to be reliable. This study is based on estimates, assumptions, and other information developed by RCLCO from its independent research effort, general knowledge of the industry, and consultations with the client and its representatives. No responsibility is assumed for inaccuracies in reporting by the client, its agent, and representatives or in any other data source used in preparing or presenting this study. This report is based on information that to our knowledge was current as of the date of this report, and RCLCO has not undertaken any update of its research effort since such date.

Our report may contain prospective financial information, estimates, or opinions that represent our view of reasonable expectations at a particular time, but such information, estimates, or opinions are not offered as predictions or assurances that a particular level of income or profit will be achieved, that particular events will occur, or that a particular price will be offered or accepted. Actual results achieved during the period covered by our prospective financial analysis may vary from those described in our report, and the variations may be material. Therefore, no warranty or representation is made by RCLCO that any of the projected values or results contained in this study will be achieved.

Possession of this study does not carry with it the right of publication thereof or to use the name of "Robert Charles Lesser & Co." or "RCLCO" in any manner without first obtaining the prior written consent of RCLCO. No abstracting, excerpting, or summarization of this study may be made without first obtaining the prior written consent of RCLCO. This report is not to be used in conjunction with any public or private offering of securities or other similar purpose where it may be relied upon to any degree by any person other than the client without first obtaining the prior written consent of RCLCO. This study may not be used for any purpose other than that for which it is prepared or for which prior written consent has first been obtained from RCLCO.

¹ NAICS codes 11 and 56, encompassing Agriculture and Administrative Services employment respectively, not included in any of below categories. Total distributions will not sum up to 100%.

² Some data issues with NAICS Code 61 – Education. University of Texas' employment decline likely attributed to a change in employee reporting by the University of Texas System.
